

Alphacourt

WebSphere Resilience Service

(Asses the stability of your WebSphere integration infrastructure)

Alphacourt will review your WebSphere integration infrastructure, assess its resilience and recommend remedial action, where appropriate.

Objective

- **Review:** To review the resilience of the following aspects within your WebSphere environment, against best practice:
 - Security
 - Exception Handling
 - Capacity Planning
 - Back Up / Recovery
 - Change Management
 - Disaster Recovery
 - Failover
 - Auditing
 - Change Management
 - Version Control
- **Recommendations:** To indicate vulnerabilities and to recommend quick wins and remedial actions.

Approach

- **Context:** Establish the context and scope of the current WebSphere environment and establish your short and long term objectives, goals and known issues.
- **Analysis:** Review the WebSphere environment and compare findings against established best practice and experience gained from comparable reviews of similar organisations.
- **Recommendations:** Alphacourt will present you with a report of the current vulnerabilities and options for remedial action, prioritised recommendations for improvements and a comprehensive action plan.
- **Implementation:** Alphacourt will deliver remedial actions for your WebSphere environment according to previously agreed plan.

Business Results

Our clients have found these business benefits in completing this exercise:

- **Reduce Costs:** Investment prioritised to areas of greatest impact for cost reductions.
- **Solid Foundations:** Improved ability to meet / exceed Key Performance Indicators (KPI's) due to solid foundations based on best practice.
- **Business Needs:** Improved availability, performance and tightened security increases customer satisfaction ratings.

Key Issues

Is your WebSphere environment robust and stable enough to cope with future demands?

Does your integration infrastructure lack credibility in the eyes of the business?

Do you spend excessive time and effort recovering from errors arising from your integration infrastructure?

Are you sure you know where you should be making improvements in your integration infrastructure?

Benefits

- You can be confident that your WebSphere environment is future proof.
- Reduce support and maintenance costs.
- Increase the business community's confidence in the integration infrastructure.

Deliverables

- A report of vulnerabilities and options for remedial action.
- A list of recommendations.
- An Investment plan which outlines potential business benefits and the costs of implementation.
